Title : Canteen Management System

Project No : Mini Project - 2

Sr.No.	Roll No.	Name of Student
1	41	Lavish Shah
2	42	Manas Shah
3	38	Hardik Sedani

Introduction:

Canteens are a daily necessity in colleges and workplaces, as many students and staff rely on them for meals. In most cases, food ordering and billing are still handled manually, which often leads to long queues, delays, and billing mistakes. As the number of users increases, managing orders and records becomes difficult. To address these issues, a web-based Canteen Management System has been developed to make the ordering and billing process simpler, faster, and more reliable.

Objectives:

1. To make food ordering easy through a web-based platform.
2. To reduce waiting time and avoid errors caused by manual billing
3. To maintain proper records and improve the overall efficiency of canteen operations.

Flow diagram:

Software:

HTML, CSS, JavaScript (Frontend), Python (Backend), MySQL/SQLite Database, Vs code, Github

Conclusion:

The web-based Canteen Management System helps in reducing manual work and improves the efficiency of canteen management. It saves time for users as well as canteen staff, reduces mistakes in billing, and provides a smooth and convenient ordering experience.
